1. Weapons System Integration Memorandum

The memorandum stating Lincoln's policy on activities related to weapons system integration is being reviewed and will be issued very shortly.

2. Talos Information

The lack of information and the actions of LPO personnel regarding new weapons systems had been discussed with Col. R. S. LaMontagne. It was stated that members of the LPO can neither commit Lincoln nor speak for it. Steps are being taken to improve the communication of related information.

3. Ferrite Memory Core Specifications

D. R. Brown made reference to T.I.R. #1-75, dated 25 May 1955, which released specifications for Ferrite Memory Cores. Changes to the specifications have since been proposed. Lincoln had been given the opportunity to comment on these specifications but was not informed of any action following the comments. Recent visits to IBM and General Ceramics have indicated that these and other changes are being implemented by IBM. The cores produced by General Ceramics differ slightly in some respects from the IBM cores. The same part number is assigned to all cores but the lots are kept separated.

Since no difficulties are arising from the specification changes it was decided that no action need be taken.

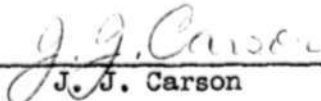

4. Status of IBM Building at Lincoln

J. W. Forrester stated that all necessary approvals have been obtained for construction of a temporary type building for IBM adjacent to Lincoln. Design of the building is underway. It will be located on the west side of Building F but the exact location has not yet been chosen.

5. Meetings Scheduled This Week

a. A discussion of pulse circuits will be held in B-317 at 1400 on Tuesday, 24 January 1956.

b. CRC has called a meeting at Lincoln to discuss SIF and IFF preliminary to action by the Requirements Advisory Group. The meeting will take place on Tuesday and Wednesday, 24 and 25 January. Representatives of the various interested Air Force agencies will be present.
