SUBJECT: 6345 COST ANALYS IS
To: N. MoL. Sage
From: Jay W. Forrestor
Date: December 27, 1948

Introduction
The attached charts present by general area and by specific activity a breakdown of the yeariy expenditures through the fiscal year 1948-1949 of Project Whirlwind - DIC Project 6345 and its predecessor Projeot 6295.

## Content

Chart 1 lists the expenditures for laboratory operation. These are costs typical of this kind of wark, associated with the sotting up and servicing of a laboratory and its personnel but not dependent on any unique technical features of Whirlwind.

Chart 2 ists the expenditures for education and training. Included are costs of reports for outside use and of time taken to discuss project work with visitors, costs incurred for supervision of thesis research (other thesis costs are considered to be compensated by the technical results achieved and are therefore charged to other departments), and technical training (initial and continuing) for personnel (the first three months expenses for each new staff momber are charged to education).

Chart 3 lists the expenditures for preliminary and airoraft analyzer work. The work first done on en aircraft analyzer was accompanied by a study of anslog complatation, which proved to be unsuitable and led to the change to digital computation.

Chart 4 lists the expenditures directly for Thirlwind $I$. These cover all labor, overhead and material specifically used for the design, construction, installation and testing of Thirlwind $I$, including the Sylvania subcontract.

## APPROVED FOR PUBLIC RELEASE. CASE 06-1104.

Charts 5 and 6 list the expenditures for supporting ongineering and for special supporting research, rospectivoly, for ithirlwind I. These efforts were necessary for solution of basic technical computer problems and for completion of rhirlwind $I$, but the results are of general bonefit and can be applied in many other ceses. The supporting research of Chart 6 is work of a basic nature, necessary to Whirlwind I, which under other circumstances might have been the subject of separate research contracts.

Chart 7 lists the expenditures for storage tube research and development. Although this whole offort is undertaken to meot the meeds of 7n:1rivind $I$, many of its resulte are of more general benefit.

Procedure
Cost figures for specific items were obtained in the following way. Certain costs could be estimated fairly satisfactorily as total sums; examples are the costs of central power supplies, commercial test equipment, and special materials for Whirlwind I. Others were best determined oy estimating the number of man-months involved and then judging, on the basis of experience, the overall man-month cost; examples are military security, thesis supervision, editing, etc. The total of all these costs for each year was deducted from the total costs for the year. The remainder was distributed over all the fields not already charged for in proportion to the number of staif months (divided into two types, matorial-using and nonmaterial using) devoted to each field as determined by a consideration of the work of each staff member in that field.

The broakdown of oxpected costs for 1948-1949 was used to obtain representative total staff-month costs. With the cost of all supporting activities charged to the primary activities, the figures obtained for 1948-1949 were $\hat{8} 900$ per month for a staff member using only incidental materials, and \$1,850 per month for a staff member regularly using materials and laboratory equipment. This approximate ratio of $1: 2$ for the two kinds of work was maintained for the other years, even though the actual items assigned and allocated and therefore the actual cost per staff-month varied considerably.

Note:
To give a partial answer to an often-asked question, the asterisks on the charts indicate expenditures which it is estimated the Institute of Advanced Study has made for equivalent work. In this estimate, one year's expenditures at Project Whirlwind have sometimes been allowed to represent several years' expenditures at IAS (as the $\$ 5,000$ for report editing and reproducing indicated in 1946-47). It is to be emphasized that the comparisons are for equivalent - not identical - activities; an examplo of this is the Whiriwind expenditure of $\$ 2,200$ for lisison with Eastman Kodak on film reader-recorders in 1947-1949, probably equivalent to LAS's expenditure for liais on with the Bureau of Standards on teletype equipment.

The total estimate of IAS's expenditures is about $\$ 260,000$, which may be substantially in error.
