General Information. Would suggest that a narrow
outside border line of glass of some color, as would
give a direct distinct outline of the day.
Light opening similar to that shown in the
larger window. They think the glass of this
border, which need not be over $\frac{3}{8}$ " wide (day-light)
should be a different color from the field.
Interior colors white and gray, and a narrow

Strip of wood buri will surround its windows
which will be painted gray.

Both windows open into Saharooms displaying
ladies seats and other ready to wear goods.

Building designed in the Georgian
Adams type.
