General Information. Inserts in leaded glass lights between vestibule and main hall. Wants suggestions for arrangement. Can probably fill the upper lights with wrought iron scroll work, or raise the stools of the two side lights, or do both, if the fragments are insufficient.

Eight pieces of old glass to be arranged in a design of some sort, on a background of oblong quarries. White background to be somewhat obscure - The Ambetti white seems to be the most desirable Reinforced lead to be used.

For addresses of those to be notified as window progresses, see other side.
