General Information

We have studied these in relation to your present windows and are sending you the color sketch, herewith.

Being somewhat different in shape, we have suggested forms that take their place to best advantage in these proportions.

The coloring can readily be deeper if you prefer. The central portion could be warmer or cooler, that is more or less amber, and the blue border could be richer.

I imagine you will have new single sash; or remove the smaller horizontal and vertical mullions, retaining the present double hung sash.

We will need a template of the curved head, and careful measurements of the full and sight sizes, below.
