Streets

In general, Tarle's Drawn Map is very accurate and flaws come more often from omission rather than entanglement of too many confused details. In the B.B. section she has all the alpha-beta sts. plus a non-existent i (I) street. The long sts. however run only from Delwight to Clarendon a Berkeley w/ the exception of Beacon which runs its full length from Mass. to Tremont. This is absolute of the base map except that here her alpha-beta sts go out thro D. The long sts run from Delwight to Dartmouth + Newbury, is omitted.

South End -

4D 2C

On drawn map, the omission of the B + A. R.R. yard throws off her connection bet. B.B. + So. End. Putland + W. Springfield starts from Baylston straight thro to Washington, rather than from S. Botolph's. Several other parallel unnamed sts. suffer from this omission. Clarendon fails to make its full connection thru to Tremont, but Ark. Berk, + Dartmouth are accurate. On the base map this connecting area between B.B. + So. End is omitted.

On ~~base~~ drawn map, Tremont, Shearman + Washington accurately carried out with the cross sts. The base map offers less detail where the

3C

drawn map has ~~is~~ ^{more} + more where it doesn't.

Beacon Hill is similar on the two maps, but the drawn has a bit more street detail. 7C?

2C 3I

The closure of Cambridge & Tremont marks the ^{east} boundary of Taulis' detail ~~2~~ on drawn map. On base map, the North Church trip makes less detail Hanover, Sudbury, Salem, etc.

The drawn map offers accurate + more detailed ^{information} of the downtown area. So. Station and Atlantic Avenue are not in their proper relationship however. Otherwise, the downtown + So. End ~~2~~ go together well as do the relationships of the individual ~~2~~ within the downtown area. 8C?
