R. R. Shorey

SD Console Visors for production machines was discussed. Two drawings of proposed visors were reviewed. Questions were raised on: (1) How would visors be attached to consoles? (2) Would these proposed visors hinder the operation of the light guns? This will be further investigated by IBM.

Label Changes

As a result of the issuance of the operational specifications, major label changes are in the process of being generated. Lincoln will attempt to have this change information available by 15 January.

A solution to the problem of increasing the selection capacities of the GFI monitors for more than fifteen radar sites was given by W. S. Squire. His proposal, in general, eliminated the 10 light IND module and substituted a 2 x 5 module. The proposal is now being written by IBM.

S-28, Digital Data Transmitter Specifications were reviewed. Lincoln commented that these specifications should not specify the details of BTL furnished equipment.

D-51-3, Change to Crosstelling Input Specifications, which is a change in the synch period, received concurrence intact. This modifies the crosstell word format to make the Crosstell Input Specifications compatible with the DDR specifications as released in T.I.R. 1-125. It is expected that this change will be in the initial machine.

P-227-2, Satellite Control Cable Assembly, was dropped pending further maintenance experience from XD-1. The change proposed a push button control assembly as a method of controlling the computer action when marginal checking the display frames.

P-228-2, Concurrence to Supplement 1 of 6M-3851-1, Master Reference List of Equipment Specifications for XD-1, received concurrence with minor clarifications to concurrence dates. Supplement 1 lists specifications which received concurrence from 11 October 1955 thru 17 November 1955.

The next concurrence meeting is scheduled for Thursday 12 January 1956 at Poughkeepsie.
