Height from floor: 1 8th

Points of compass: 1 North - 1 West
Quality of light:

Inscription: None

Design wanted: Staging
Shipping address: Blueprints

Bill to: Temples

Photos of Cartoons Mailed

General Information: "In reference to the two Narthex windows, Dr. Ames prefers to have sun clear glass in the west one, but obscure glass in the north one, since the view of the yard to the north is not in his opinion desirable to be brought into the narthex. (Accents of pure color.)"

"Each of these windows have Lupton casements. I was formerly under the impression that they were divided with steel muntins, but I find that they are glazed with lead camea. That of course makes a less difficult situation for you because if the glass is to be replaced you would want to replace the lead as well, but we should retain the casement frame and sash in these windows."

"Your narthex windows would cost about $135.00 each carried out in this manner (Saint James', Danbury, Aisle)."

For addresses of those to be notified as window progresses, see other side.

(over)
"I think that your measurements for the little triangular openings will do very nicely. As you suggest, we can probably plot the curves fairly accurately. We will make a good allowance of lead for the corners so that it can be trimmed off to fit closely into the opening."
