General Information Grisaille Window

*"As the window is rather deeply recessed and not greatly exposed to direct sunlight, I should suppose that light and brilliant tones might well predominate in the glass" (4/7/33).

Description of the design. "The foliated grisaille in light cool tints is enriched with a border of brilliant pure color. Other small spots of color through the field echo this stronger note and unite in harmonious tones with the symbol of Christ Triumphant over the World". 4/26/33

The template was taken from the inside and all sizes marked on same are sight sizes. There are no tee bars in window at present,all that is on windows are two stay bars of 3/16" in diameter. (Widman,May 23,1933).

For addresses of those to be notified as window progresses, see other side.
