General Information Windows should be very simple, with clear fields and not  
more than a small border of rich color. Keep this character, and at the  
same time temper and modify the light with a delicate patterning of  
grisaille. (See photographs of balcony windows in Church of Our Lady of  
Lourdes, Jamaica Plain, and tower window in St. Agatha's Church, Philadelphia.)

12 x 63 inches each panel.

This is a small Cape Cod Colonial Chapel. They are using clear glass in  
all the other windows.

When we sent the design we said, "....the design offers an excellent  
solution to the problem, -- keeping the window in light tones to harmonize  
with your other windows, but involving enough patterning and texture to

For addresses of those to be notified as window progresses, see other side.

control the strong illumination. The growing foliated forms suggest the type of enrichment known as grisaille, but without introducing any mediaeval characteristics. The touches of gold enrich the pattern and prevent the color scheme from being too cold."

The measurements of the chancel windows are 12 x 63 inches. The glass sets against a 1/4 in. rebate, which runs around the top and two sides, but not the bottom. In front of the glass will be a 3/4 x 1 1/4 in. stop. See detail from blue-prints and also a snapshot of the exterior.
