clerestory? For addresses of those to be notified as window progresses, see other side.	1 t

We are sending you's rough sketch suggestion for the temporary glass at the Cothedr 1.

The have slightly emphasized a border tone, and have introduced a little pure color in the unper parts of the lancers. I think these night well take various historic forms of the Cross, and I believe we can include them within your budget.

Mr. Whitehouse wrote: "There is one clerestory window in the choir which occurs at the organ chamber. Of course, this will be blanked off by some insulation board on the inside and never be seen or will it be needed for any light. My only reason for putting the window together with tracery in the organ chamber was to balance out the exterior. For this window you might make it up in leaded glass, the leadings to match the other Tudor glass, but glaze it with some very ordinary glass that will give the same appearance, possibly, on the outside. I am doing this not only to save on the Tudor glass, but also to save any expense possible.

For the windows to be glazed with the temporary Tudor glass, I am sending some blue prints marked to show the windows you are to furnish under this order. The windows for instance, in the Sacristy, would be glazed in Spokane as they are in steel sash, and will probably be of some simple glass like a Marine Antique which is available locally."

NOTE: For the choir window which occurs in the organ chamber. dig up some less expensive glass to use here. Of course we shall want its exterior texture to correspond with the rest of the windows.
